

MAJOR ASSESSMENT

Smart planning through reliable information

Major Assessment delivers the answers

A Major Assessment is an engineering assessment that studies the current condition of your crane and provides a theoretical estimate of its remaining design life. It has been designed to satisfy the requirements of AS2550.1 2011 Section 9 Major Assessment.

The study results in a comprehensive report and expert consultation with a plan for current and future use of your lifting equipment. You get a valuable tool when dealing with an aging crane fleet, changes in production, safety issues, and other possible concerns.

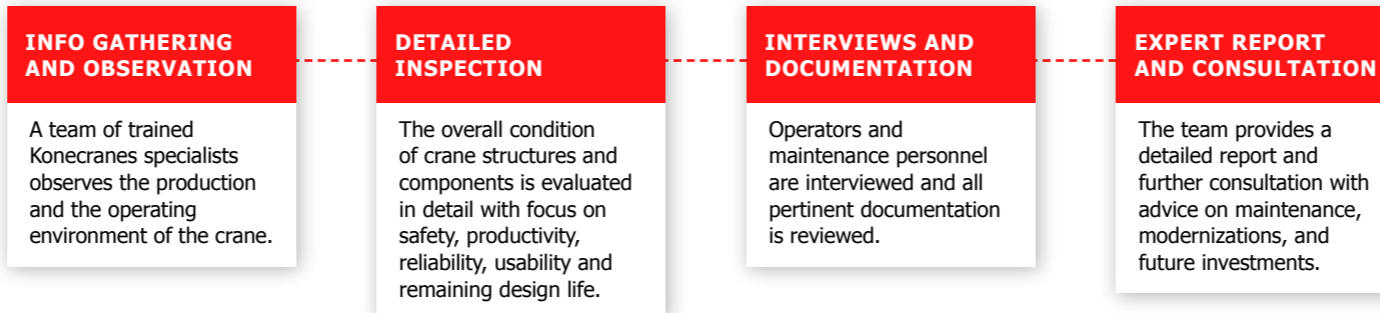

Are your cranes fit for the future?

Rising maintenance costs. Challenges to meet current production needs. Safety concerns. These are problems you face every day as a crane owner in a changing operating environment.

Konecranes Major Assessment provides accurate information detailing the current condition and future needs of your crane.

It can help guide your maintenance and modernization decisions. It also provides information to increase the safety and productivity of your crane.

A thorough process with tangible benefits

INFO GATHERING AND OBSERVATION
A team of trained Konecranes specialists observes the production and the operating environment of the crane.

DETAILED INSPECTION
The overall condition of crane structures and components is evaluated in detail with focus on safety, productivity, reliability, usability and remaining design life.

INTERVIEWS AND DOCUMENTATION
Operators and maintenance personnel are interviewed and all pertinent documentation is reviewed.

EXPERT REPORT AND CONSULTATION
The team provides a detailed report and further consultation with advice on maintenance, modernizations, and future investments.

BENEFITS

- Provides information for planning the future of lifting operations based on an extensive crane study
- Provides an accurate picture of the current condition of the lifting equipment
- Delivers an estimate of the remaining design life, based on equipment classification and utilization history
- Provides an easily interpreted review of the condition of the crane
- Can enhance safety by detecting issues before they become critical problems
- Provides information that can be used to choose between an equipment modernization or replacement

Konecranes is a world-leading group of Lifting Businesses™, serving a broad range of customers, including manufacturing and process industries, shipyards, ports and terminals. Konecranes provides productivity enhancing lifting solutions as well as services for lifting equipment of all makes. In 2019, Group sales totaled EUR 3.33 billion. Including MHE-Demag, the Group has around 18,000 employees in 50 countries. Konecranes shares are listed on the Nasdaq Helsinki (symbol: KCR).
